Privacy Policy

Offworld Labs Privacy Policy

1. Who we are and what this covers

Offworld Labs LLC ("Offworld Labs," "we," "us") operates the RETINA distributed passive radar network, the offworldlabs.com website, and sales of RETINA hardware kits.
This policy explains what personal information we collect, why, who we share it with, and what choices you have. It covers:

- visitors to offworldlabs.com and related sites;
- purchasers of RETINA kits;
- RETINA node operators ("Operators"), including their use of retina-gui, Cloud Services, and the data streams.

It does not cover data that a node writes to your own storage (Local Data under EULA §6.5), which never reaches us.
Contact for anything in this policy: info@offworldlabs.com.

2. Information we collect

2.1 Information you give us

When	What	Why
Buying a kit	Name, shipping address, email, phone (optional), order details	Fulfill and support the order
Paying for a kit	Payment card details — collected and held by our payment processor ([Stripe / other]), not by us. We see the last four digits and card type.	Process payment
Creating an Operator account	Name, email, callsign (optional), password (hashed)	Administer your account, send service notices
Adding SSH keys in retina-gui	Public keys you upload	Give you access to your own node
Contacting us	Whatever you include in the message	Respond to you
Subscribing to updates	Email address	Send the newsletter you asked for

2.2 Information collected from your node

Whether any of this is collected depends on settings you control in retina-gui (EULA §5). Each is independent of the others.

Cloud Services (default: off). When enabled, the Mender client on your node sends us inventory and status data: software version, uptime, hardware identifiers, hardware status, and logs. This is tied to your node and, through your account, to you. We use it only to deliver updates and support your node.

Network Data (default: on). When enabled, your node sends detections, timing data, ADS-B data it receives, node configuration, and the precise geographic coordinates of your antenna ("Receiver Location") live to our geolocation server. This data is sent under a pseudonymous Node ID and stays inside Offworld Labs. We use it to fuse detections across nodes and to build Derived Works. It is not sold or shared per-node (Section 4).

Archive Data (default: on). When enabled, the same kinds of data are uploaded about once an hour to the RETINA Archive, a free public dataset anyone can download. Your precise Receiver Location, under your Node ID, is published. We receive no payment for the Archive.

Local Data (default: off). Written only to storage you attach. Never reaches us.

Disabling every stream leaves your node working as a standalone radar that still displays live detections to you.

2.3 Information collected automatically on our websites

Standard server logs (IP address, browser type, pages requested, timestamps) and [cookies / no cookies beyond those strictly necessary]. We use [no analytics / privacy-preserving analytics such as Plausible / other] to understand site traffic. [Confirm and list.]

2.4 What we don't collect

- We don't collect your date of birth, government ID, or financial account numbers.
- We don't receive raw payment card numbers.
- We don't collect location data from your phone or browser. The only location we hold is the Receiver Location you configure on your node, and only when Network Data or Archive Data is enabled.

3. How we use information

- To sell and ship kits and provide support.
- To create and administer Operator accounts.
- To deliver software updates and remote support to nodes with Cloud Services enabled.
- To operate the RETINA network: fuse detections across nodes, maintain the RETINA Archive, and produce Derived Works (tracks, datasets, and machine-learning models) as described in EULA §6.2.
- To publish research and share data with research partners.
- To publish Archive Data in the RETINA Archive, free of charge, under the Archive License.
- To license or sell Derived Works (fused tracks, datasets, models) that contain no per-node data.
- To send service notices about the network and this policy. Marketing email only if you opted in; every such email has an unsubscribe link.
- To detect and investigate abuse of the network, including falsified detections.
- To comply with law.

4. Node data: what we hold, what we publish, what we do not sell

This is the part that matters most to Operators, so it is stated plainly.

4.1 **Pseudonymity.** Network Data and Archive Data carry a Node ID, not your identity. The table linking Node IDs to Operator accounts is held in a separate system with restricted access. We do not join it to node data in any dataset, publication, dashboard, model, or disclosure outside RETINA Operations (Offworld Labs staff and contractors under written confidentiality).

4.2 **Receiver Location is precise.** It is included in both streams and is precise enough to identify the physical site of your antenna. We do not round, offset, or obscure it, because the data is not scientifically usable otherwise. What we withhold is who operates the node, not where it is.

4.3 **Network Data stays private.** It is held inside Offworld Labs and used to create Derived Works. It is not published and is not provided to anyone as per-node data.

4.4 **Archive Data is public.** If you enable the Archive stream, your node's data, including precise Receiver Location under your Node ID, is published in the RETINA Archive where anyone can download it. It is published under an open-data license that requires attribution and prohibits attempting to identify Operators. Once published it cannot be recalled. Anyone, including commercial users, may fuse or analyze the Archive; we cannot control that beyond the license terms.

4.5 **Per-node data is not sold.** We do not sell, license for payment, or exchange for anything of value any per-node data, from either stream. We receive no payment for the RETINA Archive. The only data products we sell are Derived Works, and those contain no per-node data, no Receiver Locations, and no lists of contributing nodes. If this ever changes, we will update this policy and ask Operators to consent again before any data is treated differently (EULA §6.7); data sent before that would not be affected.

4.6 **Dashboards.** Public dashboards show node locations offset by at least 1 km. This is a display choice; the underlying data we hold and publish is precise.

5. Who we share information with

Service providers who process data on our behalf under contract:

- Payment processing: Stripe
- Shipping and fulfillment: UPS, USPS, Federal Express
- Cloud hosting for the RETINA servers and archive: DigitalOcean
- Backups: Backblaze B2
- Over-the-air update infrastructure: Self-hosted Mender or Mender hosted by Northern.tech
- Network edge and tunnels: Cloudflare
- Code hosting: GitHub (public repositories; no Operator data)

The public. Archive Data, via the RETINA Archive (Section 4.4).

Research partners and funders. Derived Works, and the same public Archive available to everyone. Where a research collaboration involves access to Network Data, it is under a written agreement that prohibits re-identification and onward disclosure, and involves no payment to Offworld Labs for the data. Partners do not receive account information.

Customers who license or purchase Derived Works. Customers do not receive per-node data.

Legal. When required by law, subpoena, or court order, or to protect the rights and safety of Offworld Labs, Operators, or the public. We will notify you of a demand for your account information where the law allows.

Business transfer. If Offworld Labs is acquired or its assets are sold, information may transfer to the successor, who will be bound by this policy until it is changed under Section 11.
We do not sell personal information of any kind, including account information and per-node data. We sell Derived Works only; see Section 4.5 and EULA §6.2(c).

6. Retention

Data	Retained
Order and payment records	7 years (tax and accounting)
Operator account information	While your account is open, then deleted within 30 days of a deletion request
Node ID ↔ account mapping	While your account is open; severed on account deletion
Cloud Services inventory and logs	90 days rolling
Network Data	Indefinitely. Not deleted when you disable the stream or delete your account; once the Node ID mapping is severed it can no longer be connected to you.
Archive Data	Indefinitely, and published. Cannot be withdrawn from the RETINA Archive or from copies held by others.
Derived Works (datasets, models)	Indefinitely; not modified on request
Website logs	30 days
Backups	Up to 90 days after deletion from primary systems

7. Your choices

- **Network Data.** Disable at any time in retina-gui to stop live transmission. Data already sent stays (EULA §6.3).
- **Archive Data.** Disable at any time to stop future uploads to the public Archive. Data already published cannot be recalled (EULA §6.4(d)).
- **Cloud Services.** Disable at any time in retina-gui to stop inventory and log collection and remote access.
- **Local Data.** Enable at any time to keep your own copy on attached storage; we never see it.
- **Your own node data.** Your Archive Data is in the public RETINA Archive under your Node ID.
- **Account deletion.** Email us. We delete your account information and sever the Node ID mapping within [30] days. Your node keeps working; it will need a new Node ID to re-enable Network Data or Archive Data.

- **Marketing email.** Unsubscribe link in every message.
- **Cookies.** [Describe controls, or state that only strictly necessary cookies are used.]

8. Your rights

All users. You may ask us what personal information we hold about you, ask us to correct it, or ask us to delete it, subject to the retention exceptions in Section 6. Email [privacy@offworldlabs.com]. We will verify your identity by [confirming from your account email / other] and respond within [30 / 45] days.

California residents. The California Consumer Privacy Act (CCPA) applies to businesses that exceed thresholds of annual revenue, number of consumers, or revenue from selling or sharing personal information. Offworld Labs does not currently meet any of these thresholds and does not sell or share personal information. If Offworld Labs becomes subject to the CCPA, we will update this policy and provide the notices and mechanisms it requires. In the meantime, California residents may exercise the access, correction, and deletion rights described above.

Other U.S. states. Residents of Virginia, Colorado, Connecticut, Utah, Texas, Oregon, and other states with comprehensive privacy laws]have similar rights; the process above applies.

Outside the United States. Network participation is offered to Operators in the United States (EULA §15.3). We do not direct our services to individuals in the European Union, United Kingdom, or elsewhere and make no representation that this policy satisfies the requirements of those jurisdictions. If you are located outside the U.S. and have a question about your information, contact us and we will respond as a matter of courtesy.

9. Security

Account information and the Node ID mapping are stored with access restricted to Offworld Labs staff who need it. Passwords are hashed. Node data is transmitted over TLS. Nodes sign their data with keys held in a hardware secure element for chain-of-custody. No system is perfectly secure; if we learn of a breach affecting your account information, we will notify you as required by applicable law.

10. Children

Our services are not directed to anyone under 18. Operator accounts require you to be at least 18. We do not knowingly collect information from minors; if you believe we have, contact us and we will delete it.

11. Changes to this policy

We may update this policy. We will post the new version at offworldlabs.com/privacy with a new effective date and, for material changes affecting Operators, notify you through retina-gui or by email at least 14 days before the change takes effect. Material changes to how node data is used are also subject to re-consent under EULA §6.7. Prior versions are archived at [offworldlabs.com/privacy/versions].

Notes for OWL Internal Use

1. Section 4.5 and 8: the CCPA position rests on not meeting any applicability threshold. Not selling per-node data eliminates the 50%-of-revenue prong; the revenue and consumer-count prongs must be re-checked annually. Confirm that free, uniform publication of the Archive and research collaborations involving Network Data do not amount to disclosure for "valuable consideration."
2. Section 4.4: public release of precise Receiver Location is a deliberate design choice with explicit Operator acknowledgement in retina-gui (EULA Appendix A). Consider whether any additional notice is warranted.
3. Section 6: indefinite retention of Network Data after account deletion relies on the severed-mapping argument. Archive Data is public and cannot be withdrawn regardless.
4. Section 8: confirm which state privacy laws apply given Offworld Labs' revenue and user counts; most have thresholds that would currently exclude it.
5. Section 5: every processor listed needs a data processing agreement on file.
6. Section 2.2: stream defaults must match EULA §6.1 and Appendix A.
7. Version history at a stable URL is recommended; consent records reference specific versions.
