EULA

RETINA Node Software End User License Agreement

1. Parties and Acceptance

1.1 This End User License Agreement ("Agreement") is between Offworld Labs LLC, a Delaware limited liability company ("Offworld Labs," "we," "us"), and the individual or organization operating a RETINA node ("Operator," "you").

1.2 You accept this Agreement by doing any of the following: clicking "I Agree" in the RETINA node interface (retina-gui); enabling any cloud service on a node; enabling any data stream on a node; or otherwise using the RETINA Software in a manner that transmits data to Offworld Labs.

1.3 You represent that you are at least 18 years old and, if accepting on behalf of an organization, that you have authority to bind it.

1.4 If you do not accept this Agreement, you may still use the open-source RETINA Software under its applicable open-source licenses, but you may not connect to the RETINA network or use Offworld Labs' hosted services.

2. Definitions

- **"RETINA"** means the Radio Echo Tracking by Inter-Node Analysis project operated by Offworld Labs.
- **"RETINA Software"** means the Owl OS image, the retina-node software stack, retina-gui, the RETINA server software, and associated OTA tooling, in each case as published by Offworld Labs.
- **"Open-Source Components"** means those parts of the RETINA Software, and any third-party software included in it, that are distributed under an open-source license.
- **"Hosted Services"** means the RETINA geolocation server, the RETINA Archive, the Mender OTA update infrastructure, dashboards, and any other service operated by Offworld Labs for the network, whether or not the underlying code is open source.
- **"Node"** means a receiver installation running the RETINA Software.
- **"Receiver Location"** means the geographic coordinates of a Node's antenna as configured by the Operator or determined by the Node.
- **"Network Data"** means data sent by a Node to the RETINA geolocation server for live multi-node fusion.
- **"Archive Data"** means data sent by a Node to the RETINA Archive for public release.
- **"RETINA Archive"** means the public dataset of Archive Data published by Offworld Labs under the Archive License.
- **"Archive License"** means the open-data license under which the RETINA Archive is published, currently [ODbL 1.0 with the Offworld Labs no-re-identification rider] at [URL].
- **"Local Data"** means data written by a Node to storage media attached or linked by the Operator.

- **"Per-Node Data"** means Network Data or Archive Data from an individual Node, or any dataset in which individual Nodes' contributions or Receiver Locations can be distinguished.
- **"Fused Output"** means target tracks, position estimates, and other products derived by combining data from more than one Node, or from a Node with external data, in which Per-Node Data cannot be distinguished.
- **"Derived Works"** means Fused Output, curated datasets, statistical products, and machine-learning models produced by Offworld Labs in whole or in part from Network Data or Archive Data.
- **"RETINA Operations"** means Offworld Labs, its employees, and contractors who are bound by written confidentiality obligations to Offworld Labs. It does not include research partners, funders, customers, or other third parties.
- **"Operator Identity"** means your name, email address, callsign, account credentials, payment details, and any other information that identifies you as a person or organization.
- **"Node ID"** means the pseudonymous identifier under which a Node transmits Network Data and Archive Data.

3. Scope of This Agreement

3.1 **Open-Source Components.** The RETINA Software is published under open-source licenses identified in the applicable repositories. Nothing in this Agreement limits any right granted to you by those licenses. Third-party components, including without limitation the SDRplay API and SDRconnect, the Mender client, and Docker, are governed by their own license terms, which you must comply with.
3.2 **What this Agreement governs.** This Agreement governs (a) your use of the Hosted Services, (b) your participation in the RETINA network, (c) the license you grant to Offworld Labs over data your Node transmits, (d) your use of RETINA trademarks, and (e) the terms of sale for any hardware you purchase from Offworld Labs.
3.3 **Self-hosting.** You may run your own instance of the RETINA server software under its open-source license. This Agreement does not apply to data sent to a server you operate, and Offworld Labs has no obligations with respect to such an instance.
3.4 **Derived Works are not open source.** Derived Works created by Offworld Labs are the proprietary property of Offworld Labs and are not licensed under any open-source license unless Offworld Labs expressly publishes them under one. This does not restrict what you or others may create from the RETINA Archive under the Archive License.

4. Hardware

4.1 **Kits.** If you purchase a hardware kit from Offworld Labs, title passes to you on receipt of payment. Kits are sold as-is. Offworld Labs provides no warranty on hardware beyond any warranty passed through from the original manufacturer.
4.2 **Operator-supplied hardware.** You may run the RETINA Software on hardware you supply. Offworld Labs makes no representation that any particular hardware will function with the RETINA Software.
4.3 **Installation.** You are solely responsible for the physical installation of your Node, including antenna mounting, electrical safety, structural attachment, lightning protection, and compliance with local building, zoning, and homeowners' association requirements.
4.4 **Safety, Installation, Grounding, and Lightning Protection.**
(a) **WARNING: ELECTROCUTION AND LIGHTNING HAZARD.** Improper grounding, or contact with electrical or lightning energy, can cause **death, serious injury, fire, or equipment damage**. The antenna system must be

bonded and grounded/earthed to the building's grounding (earthing) electrode system per the applicable code for your region, including without limitation:

- **USA**: NEC Article 810 (NFPA 70)
- **Canada**: Canadian Electrical Code (CSA C22.1), Sections 54 & 10
- **Australia / NZ**: AS/NZS 3000 Wiring Rules, Section 5

Do not use an isolated, unbonded ground. Keep the antenna, mast, and tools **clear of overhead power lines** at all times; contact can be fatal.

(b) **General grounding guidance.** Every jurisdiction is different. You must look up your local codes, but generally you will likely need to: (i) install grounding blocks near the entrance of the building for each antenna coax run; (ii) install a ground rod and connect each grounding block to it; (iii) install a ground wire from the antenna mast to the new ground rod; and (iv) install a ground wire from the new ground rod to the service entrance ground rod. A copper #10 or #8 AWG wire is commonly required to ground the system against lightning strikes, and a bare #6 AWG wire may be required for the connection between ground rods. This guidance is informational only and does not replace applicable codes or the judgment of a qualified installer.

(c) **Qualified installation and AHJ compliance.** Installation should be performed by a qualified person. In jurisdictions that require it, electrical installation work must be performed by a licensed electrician. In the USA and Canada, if you install the system yourself, you must first verify permit, inspection, and code requirements with your local Authority Having Jurisdiction (AHJ) or electrical safety authority. You are solely responsible for confirming who is qualified to perform the installation in your jurisdiction and for obtaining any required permits or inspections.

(d) **Physical installation risks.** Antenna installation may involve working at height, on rooftops, ladders, or elevated structures, and carries inherent risks of fall, injury, or death. You assume all risk associated with the physical installation, maintenance, and removal of a Node and its antenna system. Offworld Labs does not direct, supervise, or approve any installation and makes no representation that any particular mounting location, method, or hardware is safe or suitable.

(e) **Limitation of liability.** OFFWORLD LABS IS NOT RESPONSIBLE OR LIABLE FOR ANY DEATH, INJURY, PROPERTY DAMAGE, FIRE, OR EQUIPMENT FAILURE RESULTING FROM (I) IMPROPER, INCOMPLETE, OR NON-CODE-COMPLIANT GROUNDING, BONDING, OR EARTHING OF THE ANTENNA SYSTEM; (II) CONTACT WITH ELECTRICAL OR LIGHTNING ENERGY DURING OR AFTER INSTALLATION; (III) FALLS, STRUCTURAL FAILURE, OR ANY OTHER INCIDENT ARISING FROM THE PHYSICAL INSTALLATION, MAINTENANCE, OR REMOVAL OF A NODE OR ANTENNA; OR (IV) ANY OTHER ASPECT OF THE PHYSICAL INSTALLATION OR OPERATION OF YOUR NODE NOT EXPRESSLY UNDERTAKEN BY OFFWORLD LABS IN WRITING. PROPER GROUNDING IN ACCORDANCE WITH ALL APPLICABLE ELECTRICAL CODES AND LOCAL AUTHORITY (AHJ) REQUIREMENTS, AND SAFE INSTALLATION PRACTICES, ARE THE SOLE RESPONSIBILITY OF THE INSTALLER AND/OR OWNER.

(f) **Safety label.** Refer to the safety warning label included with your kit and in the RETINA Installation Guide for additional visual safety guidance. The label does not limit or expand the obligations and disclaimers in this Section.

5. Hosted Services and Remote Access

5.1 **Cloud services.** The RETINA Software includes a Mender client for over-the-air updates and remote management. Cloud services are disabled on a fresh installation and are enabled only when you consent in retina-gui. When enabled, Offworld Labs may (a) deliver software updates to your Node, (b) query Node inventory and status, and (c) open a remote shell to your Node for diagnostic purposes.

5.2 **Disabling cloud services.** You may disable cloud services at any time from the Node interface. While disabled, your Node will not receive updates and cannot be remotely accessed. Toggling is blocked while an

update is in progress.
5.3 **Data streams.** The Network Data, Archive Data, and Local Data streams described in Section 6 are each controlled by a separate setting in retina-gui, independent of cloud services and of each other. No stream requires cloud services to be enabled, and cloud services do not require any stream.
5.4 **Disabling a data stream.** You may disable any stream at any time from the Node interface. Disabling stops future transmission for that stream only; the Node continues to display detections locally and, if cloud services are enabled, continues to receive updates. Data transmitted before disabling remains subject to Section 6.
5.5 **Updates.** Offworld Labs may push updates that change Node behavior, including the data streams described in Section 6. Changes to data terms are subject to Section 6.7.
5.6 **Remote shell.** Offworld Labs will use remote shell access only for troubleshooting, support you have requested, or investigating suspected abuse of the network, and will not use it to read Local Data.
5.7 **Cloudflare Tunnel.** Tunnel forwarding is optional and configured by you. Offworld Labs is not responsible for services you expose through a tunnel.
5.8 **SSH keys.** Keys you add via retina-gui are yours. Development images may contain Offworld Labs developer keys; production release images do not. [Verify this is true before shipping.]
5.9 **Availability.** Hosted Services are provided on a best-effort basis with no uptime commitment.

6. Data

6.1 Data streams

Your Node can produce three data streams. Each is controlled independently in retina-gui.

Stream	Destination	Default	Who can access it	Contains Receiver Location	Contains Operator Identity
Network Data	RETINA geolocation server (live)	On	RETINA Operations only	Yes	No — Node ID only
Archive Data	RETINA Archive (uploaded hourly)	On	Public	Yes	No — Node ID only
Local Data	Operator-attached media	Off	You	Yes	As you choose

The Node displays live detections locally regardless of these settings. A Node with all streams disabled remains a functioning standalone radar.

6.2 Terms common to Network Data and Archive Data

(a) **Receiver Location.** Both streams include precise Receiver Location, which is required for the data to be scientifically usable and cannot be omitted, obscured, or coarsened. You acknowledge that Receiver Location is precise enough to identify the physical site of your antenna, and that anyone holding Per-Node Data could locate that site. Offworld Labs' commitment is to withhold Operator Identity, not to prevent inference of the site from the coordinates themselves.

(b) **Pseudonymity.** Both streams are transmitted under your Node ID and never include Operator Identity. Offworld Labs maintains the mapping between Node ID and Operator Identity in a separate system and will not join the two in any data product, publication, or disclosure outside RETINA Operations.
(c) **Per-Node Data is not sold.** Offworld Labs does not sell, license for payment, or exchange for other consideration any Per-Node Data. Offworld Labs receives no payment for the RETINA Archive. The only data products Offworld Labs sells are Derived Works, and Fused Output that is sold or published does not contain Per-Node Data, Receiver Locations, or lists of contributing Nodes. Any change to this practice is a material change to data terms and takes effect only after your renewed consent under Section 6.7; it would not apply to data transmitted before you consent.
(d) **License grant.** You grant Offworld Labs a perpetual, irrevocable, worldwide, royalty-free, sublicensable license to store, reproduce, process, aggregate, modify, and create Derived Works from Network Data and Archive Data, and to publish Archive Data under the Archive License, for any purpose, including without limitation:
(i) scientific research and publication; (ii) sharing with research partners, funders, and collaborators, subject to 6.2(c); (iii) creating, licensing, and selling Derived Works; (iv) training, evaluating, and deploying machine-learning models, including models whose weights are not publicly released.
(e) **Ownership.** As between you and Offworld Labs, you retain ownership of the raw data your Node produces. Offworld Labs owns the Derived Works it creates.
(f) **Consideration.** The license in 6.2(d) is granted in consideration of your access to the Hosted Services and participation in the RETINA network. Offworld Labs intends to continue publishing the RETINA Archive free of charge, providing a public dashboard, and publishing the RETINA Software under open-source licenses, but does not undertake to do so under this Agreement.

6.3 Network Data

(a) Network Data is sent live to the RETINA geolocation server for multi-node fusion. It is required for your Node to participate in fusion. If you disable it, your Node's detections are not combined with those of other Nodes.
(b) Network Data is held within RETINA Operations. It is not published and, per 6.2(c), is not currently sold or provided to third parties as Per-Node Data. Offworld Labs uses it to create Derived Works.

6.4 Archive Data and the RETINA Archive

(a) Archive Data is uploaded to the RETINA Archive approximately hourly and is published there, free of charge, to anyone, under the Archive License.
(b) **Public disclosure.** By enabling Archive Data you acknowledge that your Node's detections and precise Receiver Location, under your Node ID, will be publicly downloadable by anyone, and that once published they cannot be recalled. You also acknowledge that third parties may use the RETINA Archive, including to perform their own fusion, and that Offworld Labs cannot control such use beyond the terms of the Archive License.
(c) **Archive License.** The Archive License requires attribution, requires that redistributed copies of the Archive be shared under the same terms, and prohibits attempting to identify Operators from the data. It permits commercial and non-commercial use of the Archive by others.
(d) **Opting out.** You may disable Archive Data at any time. Disabling stops future uploads. Data already published remains in the RETINA Archive and in copies held by others, and cannot be withdrawn. Network Data (Section 6.3) is unaffected by this setting.

6.5 Local Data

(a) You may configure the Node to write Local Data to a USB drive, external drive, or network location you attach (default: off), regardless of the other stream settings. Local Data is yours. It is not licensed to Offworld Labs and you may use it without restriction, subject only to Section 10 (Trademarks).

(b) You may not distribute Local Data under the RETINA name, or represent it as RETINA-certified, RETINA-validated, or otherwise endorsed by Offworld Labs.
(c) Offworld Labs is not responsible for the integrity, security, or loss of Local Data. Writing Local Data to the Node's SD card is not supported.

6.6 Consent record

Offworld Labs logs each change to a data stream setting, the version of this Agreement accepted, and the timestamp, on its servers. You may view your current settings and their history in retina-gui.

6.7 Changes to data terms

Any material change to Sections 6.2, 6.3, or 6.4 requires your renewed consent in retina-gui. Until you consent, your Node transmits no Network Data or Archive Data. Declining the change does not affect the license already granted over previously transmitted data, and does not withdraw data already published in the RETINA Archive.

6.8 Other data collected

Offworld Labs also collects: Node telemetry and health data (software version, uptime, hardware status, logs); ADS-B truth data your Node receives or is configured to use; and Operator Identity provided during onboarding. Telemetry is sent through the Mender client whenever cloud services are enabled, regardless of stream settings, and is used only for Node management. ADS-B data is sent with Network Data and Archive Data and is treated as part of those streams. Operator Identity is governed by the Privacy Policy at www.offworldlabs.com/privacy.

6.9 Retention and deletion

(a) Network Data and Archive Data are retained indefinitely. (b) On request, Offworld Labs will delete your Operator Identity and disassociate your Node ID from it within 30 days. This does not delete Archive Data, Network Data, or Derived Works, and does not withdraw data from the RETINA Archive. (c) Backups may retain data for up to 90 days after deletion.

7. Privacy

7.1 Offworld Labs' collection and use of Operator Identity is described in the Privacy Policy at offworldlabs.com/privacy, which is incorporated by reference.
7.2 Public dashboards display Node locations offset by ≥1 kilometer. Display locations are a presentation choice and are not a representation about the precision of data held by Offworld Labs or published in the RETINA Archive, which is precise (Section 6.2(a)).

8. Acceptable Use

You agree that you will not:
(a) operate a Node in any manner that transmits radio-frequency energy, or in violation of any applicable spectrum or telecommunications regulation, including [47 C.F.R. Part 15] in the United States and equivalent rules elsewhere;
(b) use the RETINA Software or any data from the network to target, guide, or direct weapons; to surveil, track, or identify individuals; or for any purpose prohibited by applicable law;
(c) tamper with, bypass, or extract keys from a secure element, or otherwise defeat the chain-of-custody mechanisms of the RETINA Software;
(d) submit falsified, spoofed, replayed, or synthetic detections to the network;
(e) misrepresent your Node's Receiver Location;
(f) attempt to identify other Operators from Network Data, the RETINA Archive, or Derived Works;
(g) interfere with the operation of the Hosted Services or other Operators' Nodes;

(h) reverse engineer proprietary third-party components beyond what their licenses permit;
(i) use the Hosted Services to process data from software other than the RETINA Software without Offworld Labs' written consent.

9. Export Control

9.1 The RETINA Software source code is published openly and, to Offworld Labs' understanding, is publicly available information not subject to export licensing.
9.2 Hardware kits, and any Derived Works provided to you by Offworld Labs, may be subject to U.S. export control laws. You agree to comply with all applicable export and sanctions laws and not to export, re-export, or transfer any such item in violation of them.
9.3 You represent that you are not located in, and are not a national or resident of, any country subject to comprehensive U.S. sanctions, and that you are not on any U.S. government restricted-party list.
9.4 You represent that the Receiver Location you configure is accurate and that your Node is physically located there.
9.5 Offworld Labs may suspend or terminate your access to the Hosted Services if it reasonably believes your participation would violate export control or sanctions law.

10. Intellectual Property and Trademarks

10.1 "RETINA," "Offworld Labs," the Owl OS name, and associated logos are trademarks of Offworld Labs. This Agreement grants you no right to use them except to accurately describe that your Node runs the RETINA Software and participates in the RETINA network, or to attribute the RETINA Archive as the Archive License requires.
10.2 You may not use RETINA trademarks in connection with any derivative network, service, or data product without written permission. Forks of the RETINA Software must be renamed.
10.3 Contributions you make to the RETINA Software repositories are governed by the terms stated in the repository.
10.4 If you provide feedback or suggestions, you grant Offworld Labs a perpetual, irrevocable, royalty-free license to use them without obligation to you.

11. Disclaimers

11.1 THE RETINA SOFTWARE, HOSTED SERVICES, RETINA ARCHIVE, AND HARDWARE ARE PROVIDED "AS IS" AND "AS AVAILABLE," WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, NON-INFRINGEMENT, ACCURACY, OR UNINTERRUPTED OPERATION.
11.2 RETINA is experimental research software. Offworld Labs makes no representation regarding the accuracy, completeness, or timeliness of any detection, track, or other output.
11.3 THE RETINA SOFTWARE AND NETWORK ARE NOT DESIGNED OR INTENDED FOR USE IN AVIATION, AIR TRAFFIC CONTROL, DEFENSE, EMERGENCY RESPONSE, OR ANY OTHER APPLICATION IN WHICH FAILURE OR INACCURACY COULD RESULT IN DEATH, PERSONAL INJURY, OR PROPERTY DAMAGE. YOU AGREE NOT TO RELY ON THEM FOR ANY SUCH PURPOSE.

12. Limitation of Liability and Indemnification

12.1 TO THE MAXIMUM EXTENT PERMITTED BY LAW, OFFWORLD LABS SHALL NOT BE LIABLE FOR ANY INDIRECT, INCIDENTAL, SPECIAL, CONSEQUENTIAL, OR PUNITIVE DAMAGES, OR FOR LOSS OF DATA, PROFITS, OR GOODWILL, ARISING OUT OF OR RELATING TO THIS AGREEMENT.

12.2 OFFWORLD LABS' TOTAL LIABILITY UNDER THIS AGREEMENT SHALL NOT EXCEED THE GREATER OF (A) THE AMOUNT YOU PAID OFFWORLD LABS IN THE TWELVE MONTHS PRECEDING THE CLAIM OR (B) US $100.
12.3 You will indemnify and hold harmless Offworld Labs and its members, employees, and contractors from any claim, loss, or expense (including reasonable attorneys' fees) arising from (a) your installation or operation of a Node in violation of law or of this Agreement, (b) your breach of Section 8 or Section 9, or (c) your Local Data.
12.4 Some jurisdictions do not allow certain limitations; in those jurisdictions the limitations apply to the maximum extent permitted.

13. Term and Termination

13.1 This Agreement is effective on acceptance and continues until terminated.
13.2 **By you.** You may terminate by disabling all data streams and cloud services on your Node and ceasing to use the Hosted Services. You may continue to use the Open-Source Components under their licenses.
13.3 **By Offworld Labs.** Offworld Labs may suspend or terminate your access to the Hosted Services, and revoke your Node's network credentials, on notice if you breach Section 8 or Section 9, submit falsified data, or if required by law. Offworld Labs may terminate for convenience on 30 days' notice.
13.4 **Survival.** Sections 3.4, 6.2(b), 6.2(d)–(e), 6.4(b)–(d), 6.5(b), 6.9, 10, 11, 12, 13.4, 15, and 16 survive termination.

14. Changes to This Agreement

14.1 Offworld Labs may modify this Agreement. Notice will be given through retina-gui and by email to the address on your account at least 14 days before the change takes effect, except where a change is required by law.
14.2 Changes to Sections 6.2–6.4 are subject to Section 6.7. For all other changes, continued use of the Hosted Services after the effective date constitutes acceptance. If you do not accept, you may terminate under Section 13.2.

15. Governing Law and Disputes

15.1 This Agreement is governed by the laws of the State of Delaware, without regard to conflict-of-law principles.
15.2 Exclusive jurisdiction of the state and federal courts located in Wilmington, Delaware.
15.3 Network participation is offered to Operators located in the United States. You represent that your Node's Receiver Location is in the United States. Offworld Labs does not direct the Hosted Services to persons in the European Union, United Kingdom, or elsewhere, and makes no representation that this Agreement or the Hosted Services comply with the laws of those jurisdictions.

16. General

16.1 **Entire agreement.** This Agreement, the Privacy Policy, and any hardware order confirmation constitute the entire agreement between you and Offworld Labs regarding its subject matter.
16.2 **Severability.** If any provision is held unenforceable, the remainder continues in effect.
16.3 **Assignment.** You may not assign this Agreement without Offworld Labs' consent. Offworld Labs may assign it in connection with a merger, acquisition, or sale of assets.
16.4 **No waiver.** Failure to enforce any provision is not a waiver.
16.5 **Notices.** Notices to Offworld Labs: info@offworldlabs.com. Notices to you: the email address on your account.

16.6 **Relationship.** Nothing in this Agreement creates a partnership, joint venture, employment, or agency relationship.

Appendix A — Consent Screen Text (retina-gui)

Suggested text for the three stream toggles. Each paragraph should match the corresponding Agreement section.

Send Network Data (default: on) Your node sends detections and its precise receiver location, live, to the RETINA server for fusion with other nodes. This data stays inside Offworld Labs and is not sold or shared per-node; if that ever changes, you will be asked to agree again first. Offworld Labs uses it to build fused tracks, datasets, and AI models, which it may sell. Data is sent under a node ID that is not linked to your name, email, or callsign. Turn off to stop contributing to live fusion.

Publish to RETINA Archive (default: on) About once an hour, your node's detections and its precise receiver location are uploaded to the RETINA Archive, a free public dataset that anyone can download. Your exact antenna coordinates will be public. Offworld Labs receives no payment for the Archive. Data is published under a node ID, not your name. Turning this off stops future uploads; data already published cannot be recalled.

Save Data Locally (default: off) Write data to a USB drive or network location you choose. This data is yours and is not shared with Offworld Labs. Requires attached storage; saving to the SD card is not supported.

[ ] I have read and agree to the RETINA End User License Agreement (version [ID]). [ ] I understand that with Network Data or Archive enabled, my precise receiver location is transmitted, and that with Archive enabled it is published where anyone can download it.

Notes for OWL Internal Use

1. Section 3.1 vs. 6.2(d): confirm that granting a data license via clickthrough does not conflict with any open-source license on the node software (it shouldn't, since the license is over data, not code).
2. Section 6.2(d): "irrevocable" and "sublicensable" are essential for model training and Derived Works sales; confirm enforceability of clickthrough licenses of this breadth in Delaware.
3. Section 6.2(a): the acknowledgement that coordinates identify the site is deliberate. The only promise made is separation of Node ID from Operator Identity; do not soften into a location-privacy promise.
4. Section 6.2(c): "not sold" is the basis for the position that the CCPA does not apply. Confirm that publishing the Archive free of charge and uniformly, and sharing Network Data with research partners under collaboration agreements, do not constitute disclosure for "valuable consideration." Any partner arrangement involving funding or authorship in exchange for Per-Node Data should be reviewed against the sale definition before signing.
5. Section 6.4(c): confirm choice of Archive License (ODbL + no-re-identification rider vs. custom). Confirm the rider does not make the license non-open in a way that matters to funders.
6. Section 6.4(b): public release of precise coordinates is a deliberate design choice made with the Operator's explicit acknowledgement. Consider whether any additional warning is needed for Operators whose antenna is at their residence.
7. Section 9: align with the existing ITAR/EAR analysis and the public-domain-exemption position. Consider whether Derived Works (as opposed to code or the public Archive) raise separate EAR classification questions.

8. Section 15: consumer-protection rules if selling kits to individuals in California; Delaware forum clause against consumers in other states.
9. Consider whether Sections 4 and 6 should be split into separate Hardware Terms and a Data License so they can be updated independently.
